

Waste Electrical and Electronic Equipment (WEEE) Disposal as per 2002/96/EC directive:

WEEE requires that manufacturers take responsibility for taking back and recycling their end-of-life equipment. In complying with this requirement, Peli is:

- Registering as a producer in those EU countries where it is required to do so
- Requiring its distributors/OEM's/dealer to register in those EU countries where they are required to do so
- Contracting with approved waste management organizations
- Providing information to recyclers and treatment facilities regarding removing potentially toxic substances and components
- Labeling its products with the WEEE-mandated "crossed-out wheelie-bin" symbol

Instructions for Disposal of Waste Equipment by Users in the European Union:

This symbol on the product or its packaging indicates that the product must not be disposed of with unsorted common waste. Instead, as the end-user, it is your responsibility to dispose of your end-of-life products in an environmentally-sensitive manner as follows: 1) returning it to the distributor/dealer from whom you purchased the product; or 2) depositing it in a designated collection point. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and to ensure that it is recycled in a manner that protects human health and the environment. For more information, please contact your local recycling office or the dealer from whom you originally purchased the product.

Failure to properly dispose of end-of-life products may result in the negative potential effects on the environment and human health due to the substances in electric electronic equipment (EEE). Information regarding the affects of problematic substances in EEE (including mercury, cadmium, lead, hexavalent chromium, PBB and PBDE) may be found at the following sources:
